Folio Comprehensive Regression Fixture

This fixture exercises the current Folio feature set in one document. It mixes **bold**, *italic*, ~~strikethrough~~, `inline code`, and a hyperlink. This sentence ends with a forced line break.
The next sentence should appear on a new line inside the same paragraph.

Headings And Paragraph Flow

Level 3 Heading

Regular paragraphs should remain readable across longer lines of text. This block also includes inline math such as $E = mc^2$, $p = mv$, and $\frac{1}{2}mv^2$.

Level 4 Heading

Folio should preserve paragraph spacing, inline styling, and Unicode text such as 中文测试, 日本語, and symbols like <=, >=, and +/- when written directly in Markdown.

Lists

Unordered list:

- apples
- bananas
- cherries

nested bullet alpha
nested bullet beta with `code`

Ordered list starting at 3:

3. third item
4. fourth item
5. fifth item

Task list:

- ☑ parse Markdown
- ☑ embed local images
- ☐ polish advanced cross-reference support

Blockquote

> *Folio should produce documents that open cleanly in Word or LibreOffice.*
> *Blockquotes should retain their own visual treatment and paragraph separation.*

Code Blocks

```rust
fn summarize(name: &str) -> String {
    format!("Hello, {name}! This fixture validates Folio.")
}
```

```json
{
  "app": "Folio",
  "mode": "comprehensive-fixture",
  "features": ["math", "tables", "images", "footnotes"]
}
```

Table Coverage

Feature	Alignment	Notes
Headings	centered	H1-H6 styles
Inline styles	mixed	**bold**, *italic*, `code`
Equations	editable	$a^2 + b^2 = c^2$
Images	local	PNG + SVG

Math Coverage

Inline formulas should remain editable: $x_n = x_{n-1} + \Delta x$ and $\sum_{i=1}^{n} i = \frac{n(n+1)}{2}$.

Display equation:

$\int_0^1 x^2 \, d\,x = \frac{1}{3}$

Quadratic formula:

$x = \frac{-b \pm \sqrt{b^2 - 4\,a\,c}}{2\,a}$

Matrix:

$\begin{pmatrix} a & b \\ c & d \end{pmatrix}$

Image Coverage

Raster image test:

Wide SVG banner test:

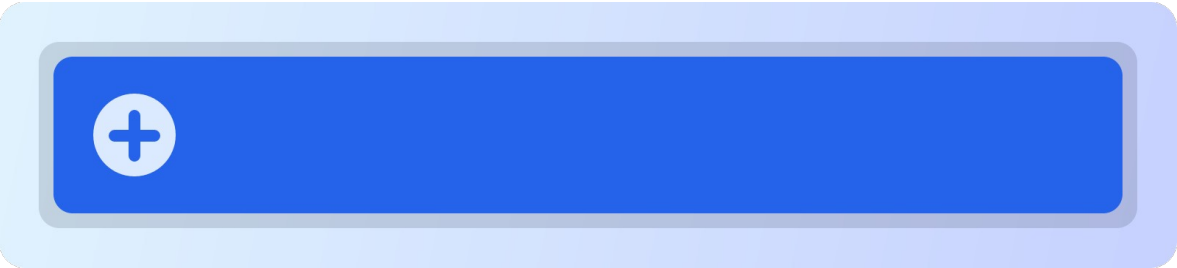

Diagram SVG test:

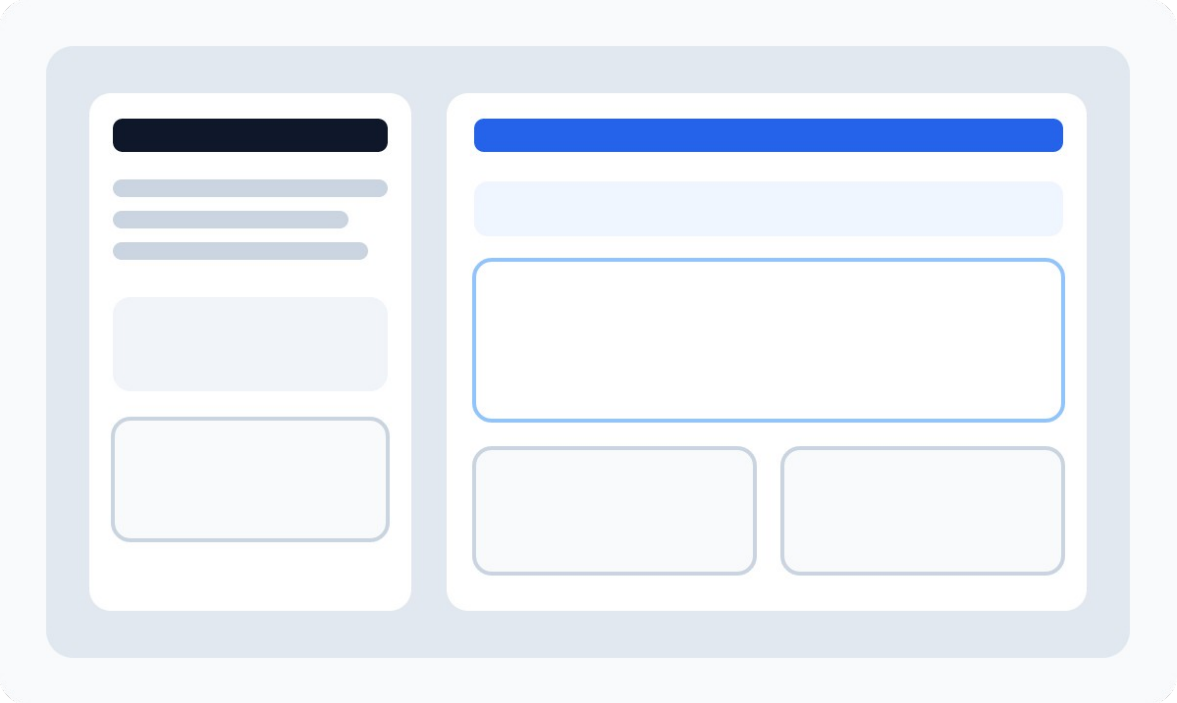

Footnotes

Folio should render native footnotes for editorial notes[1] and implementation notes[2].

Closing Notes

Use this fixture when checking output regressions in:

- paragraph styling
- list numbering
- table borders and alignment
- math fidelity
- raster and SVG image embedding
- footnote handling

1This footnote checks native footnote emission and numbering.

2This footnote confirms that longer footnote text still remains readable.
